Linux small business server

Zentyal is a commercially backed Linux small business server. Server subscriptions, additional subscription services, certified support and training provided directly by **Zentyal** developers grant you a fully functional, enterprise-level network with reduced investment and operational costs.

Zentyal Gateway

Easy and secure access to Internet. Make your network more reliable, optimize your bandwidth and control what is coming in to your network.

Zentyal Office

Manage and share office resources, including user profiles and group accounts, files, printers, calendars, contacts and tasks, and backup of data.

Zentyal Unified Threat Management

Protect your network against external attacks and internal security threats, including content filtering, virtual private networks, firewall and intruder detection.

Zentyal Unified Communications

Centralize user management and administration of communication services through one single point, from email to instant messaging and VoIP.

Zentyal Infrastructure

Manage and optimize the internal traffic of your network, including the configuration of your web and domain servers, machines and digital certificates.
