Take into account the following considerations when choosing the correct Zentyal Server Edition for your organization:

- + Is the usage of commercially supported software mandatory at your organization?
- + Do you need to guarantee access to official support in case of an emergency?
- + How critical is your deployment? What is the impact of the system downtime?
- + Does your organization have enough resources and skilled Linux system administrators to maintain the deployment, build the necessary testing environments and to carry out troubleshooting and bugfixing tasks and frequent version upgrades?

¹ Backup, User authentication in HTTP Proxy, User profile pictures management, IPSec/L2TP, Domain-based HTTPS web pages block, Importing/exporting of users and groups, Audit mode on/off (file server), Smart Admin (Kernel manager, Reports & Alerts), Antivirus on-access scan, DHCP Option 150 and 155 for IP phones configuration. Remote monitoring & management of registered servers (for distributors).
